

DEPARTMENT OF ANTHROPOLOGY
SOUTH EAST MANIPUR COLLEGE, KOMLATHABI
BSC ANTHROPOLOGY WITH HONOURS NEP 2020

Courses Objectives and Learning Outcome

Delve into the study of humanity and its diverse cultures. This program aims to cultivate critical thinking, cultural awareness, and research proficiency. Through interdisciplinary approaches, students will analyze human behavior, societal structures, and cultural practices. By the end of the course, students will possess the skills to conduct anthropological research ethically, comprehend global cultural diversity, and contribute meaningfully to addressing contemporary societal challenges. Some of the Course objectives and Learning outcome are given below:

A. Course Objectives

1. To provide a comprehensive understanding of human biology, evolution, and adaptation through anatomical, genetic, and behavioral perspectives in diverse populations.
2. To analyze cultural diversity, social dynamics, and theoretical frameworks, enabling critical analysis of societies, cultures, and human behaviors in various contexts.
3. To study human prehistory through the analysis of material culture, reconstructing past societies, behaviors, and environments using archaeological evidence.
4. Examining tourism as a cultural phenomenon, this course aims to analyze its impacts on societies, economies, and environments, while exploring sustainable and ethical tourism practices.
5. This course aims to study population dynamics through anthropological lenses, exploring factors such as fertility, mortality, migration, and their intersections with culture, health, and society.
6. This course aims to equip students with the skills to analyze human remains in medico-legal contexts, applying biological anthropology methods for forensic identification and investigation.
7. This course aims to analyze gender as a social construct, exploring its intersections with culture, power dynamics, identity, and social institutions. This course aims to study the cultural, social, and nutritional aspects of sports, exploring their impact on human health and society.
8. This course aims to analyze health through anthropological lenses, exploring cultural, social, and environmental factors influencing disease patterns, health disparities, and healthcare practices.
9. This course explores the cultural, social, and political dimensions of health, illness, and healthcare practices.
10. This course examines urbanization and its impact on culture, social organization, identity, inequality, and the built environment within urban spaces.
11. This course explores the use of visual media in anthropology, examining their role in research, representation, and communication of cultural phenomena.

Learning Outcome

1. Students will gain knowledge of human biological variation, evolution, and adaptation through anatomical, genetic, and behavioral perspectives in diverse populations.
2. Students will understand cultural diversity, social dynamics, and theoretical frameworks to critically analyze societies, cultures, and human behaviors in various contexts.
3. Students will comprehend the cultural, economic, and environmental impacts of tourism, while developing strategies for sustainable and responsible tourism practices.
4. Students will analyze population dynamics, including fertility, mortality, migration, and their cultural, social, and environmental determinants, applying demographic methods.
5. Students will acquire skills to analyze human remains, applying biological anthropology methods for forensic identification, criminal investigations, and medico-legal contexts.
6. Students will understand the social construction of gender, examining its intersections with culture, power dynamics, identity, and social institutions.
7. Students will explore the cultural, social, and nutritional dimensions of sports, examining their impact on human health, society, and behavior.
8. Students will understand epidemiological principles, health disparities, and the socio-cultural determinants of health, applying anthropological perspectives to public health issues.
9. Students will analyze health from anthropological perspectives, exploring cultural, social, and environmental influences on disease patterns and healthcare practices.
10. Students will examine the cultural, social, and political aspects of health, illness, and healthcare systems, applying anthropological perspectives to medical issues.
11. Students will analyze urbanization's cultural, social, and spatial aspects, exploring its impact on identities, inequalities, and built environments within cities.
12. Students will understand the use of visual media in anthropology, applying them effectively for research, representation, and communication of cultural phenomena.
13. Students will develop practical skills in anthropological fieldwork, museology, and dissertation research, including research design, data collection, analysis, and presentation within diverse cultural contexts.
